Prince Oluchukwu

Software Engineer & AI Data/Evaluation Specialist

princensude6@gmail.com | github.com/mills-tec | tprincedev.vercel.app | Enugu, Nigeria (Remote)

SUMMARY

Full-stack developer and technical instructor with 4 years of coding experience (self-taught from 2022, Advanced Diploma from Aptech 2023-2025) and hands-on work building and shipping production applications in Next.js, TypeScript, and Supabase. Founded EazyCodes, a web/app development business, and Coders-Versity, a tech training academy. Taught React JS as student staff at Aptech and privately to individual learners. Comfortable evaluating, debugging, and clearly explaining code quality, bugs, and reasoning, both on my own projects and on other people's work, including hands-on prompt engineering for LLM-based features.

TECHNICAL SKILLS

React.js • Next.js • TypeScript • Python • Prompt Engineering • Supabase

Languages	TypeScript, JavaScript, Python
Frameworks / Libraries	Next.js, React, Tailwind CSS, React Query, Zustand, Framer Motion
Backend / Data	Supabase, Paystack, VTpass, PostgreSQL, Row-Level Security (RLS)
AI / Prompt Engineering	System-prompt architecture, few-shot prompting, multi-step reasoning, structured JSON output design
Tooling	Git, Vite, Vercel, k6 (load testing), Vercel Speed Insights

EXPERIENCE

Founder, EazyCodes

Web & app development for businesses — Late 2025 to Present

- Delivered a full e-commerce PWA for a cosmetics brand as EazyCodes' first major client project — diagnosed and fixed Core Web Vitals issues (TTFB, CLS, LCP), resolved Safari-only memory crashes with DOM virtualization, and set up k6 load testing that identified a bcrypt-related backend bottleneck at 300 concurrent users
- Designed a prompt-engineering approach for an AI shopping assistant on the same platform: system-prompt architecture to define assistant role and limitations, few-shot prompting for common customer enquiries, multi-step reasoning for product comparison, and structured JSON outputs validated against backend data to prevent the model inventing prices or stock
- Built a short-let booking platform end-to-end (React, TypeScript, Vite, Supabase), including an admin panel, full booking flow, and Row-Level Security policies
- Built a Virtual Top-Up (VTU) MVP from scratch covering airtime, data, cable TV, electricity, exam pins, and wallet funding, integrating Paystack and VTpass
- Delivered custom websites and booking systems for small business clients, including a multi-step booking form with video hero and gallery for an interiors company

Junior Frontend Developer, TecTerminal / CPMS

Remote — Next.js, TypeScript

- Built frontend features in Next.js and TypeScript for the CPMS School Portal and ERP Administrative Dashboard, working collaboratively as part of a development team
- First professional role working with TypeScript, building the foundation for subsequent TypeScript-based projects

Freelance Developer (Remote)

Additional remote development role — 2025

• Migrated production applications to React Query v5 and resolved recurring Git branching and merge-conflict issues across multi-developer workflows

• Debugged state-management issues in a Next.js/Zustand application, tracing bugs to inconsistent auth flows across sign-in methods

React JS Instructor (Student Staff), Aptech

Mid 2025 — approx. 3 months

• Taught React JS to incoming students as student staff following graduation

• Also taught private coding lessons independently to individual learners

Founder & Instructor, Coders-Versity

Tech training academy

• Founded and ran a Summer Tech Bootcamp for learners ages 7 to 28

• Designed curriculum tracks spanning AI and Scratch basics for kids, HTML/CSS/JS for teens, and full-stack development for adults

• Reviewed and corrected student code daily, developed facilitator scripts and structured assignments

Self-Directed Python Projects

2022 – Present

• Built small applications applying functions, data structures, OOP, exception handling, and file operations to solve practical problems, including inventory tracking, expense management, and task organization tools

EDUCATION

Advanced Diploma in Software Engineering (ADSE) — Aptech (2023–2025)
